

Reconnecting Physicians

TO PRIMARY MATERNITY CARE

Maternity Care for BC (MC4BC) promotes, supports, and trains BC family physicians to reconnect with low-risk maternity services through mentorship, hands-on experience, and financial support. MC4BC is designed for family physicians to begin, maintain, or reintroduce obstetrical care in their practices.

As a part of its mandate to support full-service family practice, the GPSC, a partnership of the Government of BC and Doctors of BC, is committed to increasing the number of family physicians who do general practice obstetrics.

MC4BC offers participants post-program mentorship, antenatal/postpartum care support, self-directed learning experience, funding to support activities, and flexible timelines and schedules.
